ReturnShield

PARADITI Corp

AI-Powered Multi-Stage Return Fraud Protection & Verification

For Sellers

Seed Round Open

THE PROBLEM

The Return Fraud Epidemic for Small Sellers

Major platforms historically side with the buyer. Small sellers are left exposed, unprotected, and penalized.

Platform Bias

Amazon, Flipkart, and Meesho routinely side with buyers in dispute scenarios, leaving MSME sellers with no recourse.

Common Fraud Tactics

Sellers receive empty boxes, bricks or sand in place of returned goods, buyer-damaged items, or suffer theft during reverse logistics — Transit Fraud.

Financial Toll

Brutal chargebacks, suspended accounts due to "bad faith metrics," and 20–30% revenue losses during peak holiday seasons.

The Scale of the Crisis

Return fraud costs Indian sellers an estimated **₹4,000 Crores annually**. It's time to shift the liability away from small sellers with definitive, algorithmic proof.

The Solution: Trustless AI + Blockchain Verification

3

Verification Tiers

Pre-shipment, doorstep pickup, and warehouse — a complete chain of custody

30s

Seller Scan Time

Lightning-fast video capture to hash and anchor item state before dispatch

₹4K Cr

Annual Fraud Cost

The fraud burden on Indian e-commerce sellers that ReturnShield directly addresses

100%

Tamper-Proof

Cryptographic anchoring on Polygon blockchain ensures immutable, timestamped proof

---

A 3-tier tracking engine designed to capture and cryptographically anchor the state of a package before it leaves the seller — then verify it at every handoff.

Product Workflow: Triangulating Liability at Scale

01

Pre-Shipment (Seller)

30s video captures item weight, shape, and condition. Hash is minted on the Polygon blockchain for immutable timestamping.

02

Doorstep Pickup (Delivery Agent)

Mobile agent scan uses TensorFlow & OpenCV edge models to compare the physical package handed by the buyer against the blockchain record.

03

Warehouse Arrival (Reverse Logistics)

Final scan upon arrival completes the triangulation. If Pickup ≠ Shipment: buyer fraud identified, refund blocked. If Warehouse ≠ Pickup: transit theft identified, platform compensates seller.

04

Genuine Return Verified

If all three nodes match, automated platform deductions are bypassed — **only the Seller can initiate the final return/refund**, securing MSME cash flow.

Intellectual Property & Defensibility

The "IP Fortress" Strategy — Patent Pending

Utility Patent (Pending)

"Multi-Stage Triangulation of Tampering" via Blockchain & Edge-AI Hash Matching. Any platform copying the 3-node verification pipeline faces infringement litigation.

Trade Secrets

Isolated Neural Network anomaly models (OpenCV training data) and proprietary algorithms for compressing 4K packaging video into lightweight, tamper-proof hashes locally on the seller's device.

Copyright & Trademarks

Strict protection over all codebase workflows, API routing logic, and the PΛRΛDITI / ReturnShield brand assets.

Business & Revenue Model

Highly Scalable B2B SaaS

1

Subscription Tiers

Free trial to onboard sellers. Basic at ₹199/month covers 50 verifications. Pro Tier offers discounted bulk rates for high-volume sellers.

2

Pay-Per-Verification API

A micro-transaction model charging ₹5 to ₹10 per verified AI-assisted return pickup via our API — perfect for platforms and logistics partners.

3

Insurance Add-On

- Upsell premium coverage (+1%) on high-value electronics
- Offsets platform denial claims for sellers
- Recurring, low-friction revenue stream tied to GMV

Platform Integration Strategy

How ReturnShield fits into the existing ecosystem — without disrupting it.

Amazon SP-API
Auto-sync Order IDs and trigger return webhooks directly from seller accounts

Meesho Integration
Lightweight webhook layer compatible with Meesho's seller portal infrastructure

Ecom Express
Embedded agent tool support for doorstep scan triggering via mobile SDK

Shopify / WooCommerce
Roadmap: native plugin API to extend protection beyond Indian marketplaces to D2C brands

Flipkart Seller APIs
Native integration to capture return events and push blockchain verification responses

Shadowfax / Delhivery
Delivery partner APIs digest our return verification boolean responses without overhauling existing tech stacks

Dispute Automation
One-click "Push Evidence" formats discrepancy scores and blockchain proof into the exact ticket template requested by platform support teams

GDPR / DPDP Compliant
Blockchain hash layer uses anonymized features only; Order ID processed — no buyer PII stored

Market Opportunity & Investor Scope

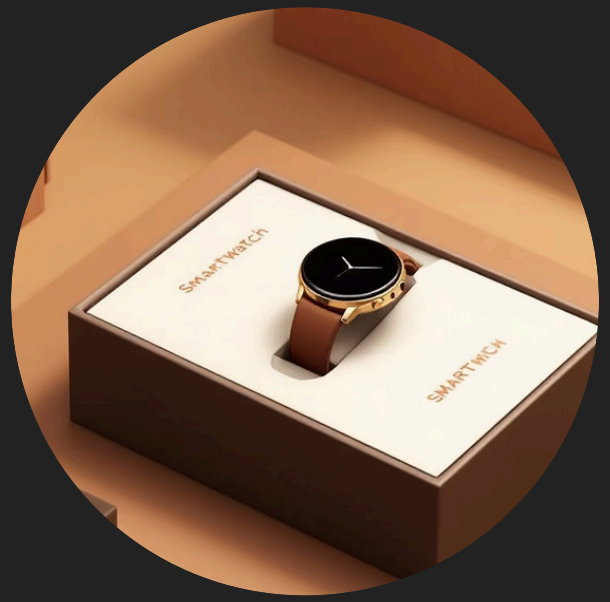
A massive, underserved addressable market — and ReturnShield is first-mover.

1.2M+ Sellers

India has over 1.2 million registered e-commerce sellers. The majority operate as MSMEs highly vulnerable to return friction and platform bias.

$1.2B TAM

Total Addressable Market globally in specialized seller protection services. ReturnShield enters at the ground floor of a rapidly expanding category.



Immediate ROI

Blocking just **one** fraudulent smartwatch return (₹5,000) pays for 2 full years of the standard software subscription. The value proposition is instant.

The Ask

Seed Investment & Next Steps

1. **Platform Whitelisting**
   OAuth 2.0 seller consent flows deployed; GDPR/DPDP Act compliant blockchain hash layer approved by platform data teams

2. **Cloud GPU Infrastructure**
   Seed funds deployed to scale cloud GPU architecture for OCR and AI visual inspection at volume

3. **GTM Launch — Electronics & Apparel**
   Initial go-to-market targeting small electronic and apparel sellers — highest fraud frequency, highest ROI use cases

4. **API Ecosystem Expansion**
   Onboard Shadowfax, Delhivery, and Ecom Express as embedded agent partners; activate Pay-Per-Verification API revenue stream

5. **Shopify / WooCommerce Plugin**
   Scale from standalone dashboards to a native plugin for D2C brands — opening international seller markets
